PRODUCT ADVICE

PROTOTYPING

PRODUCTION

A leading global manufacturer of custom precision rubber & plastic mouldings

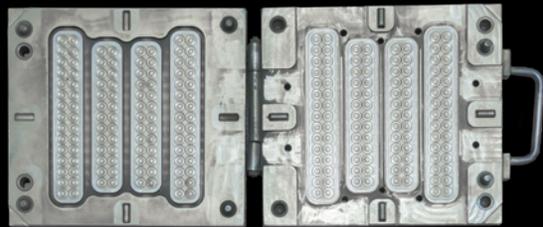

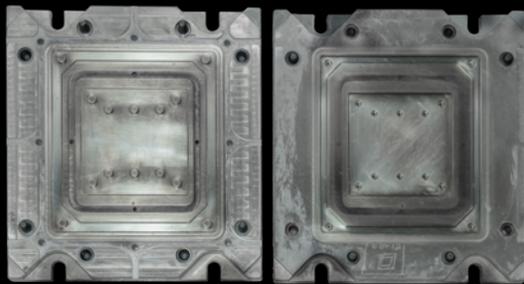

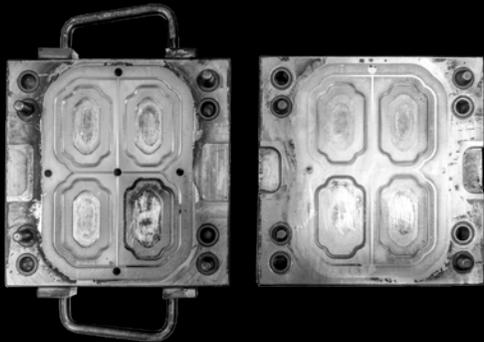

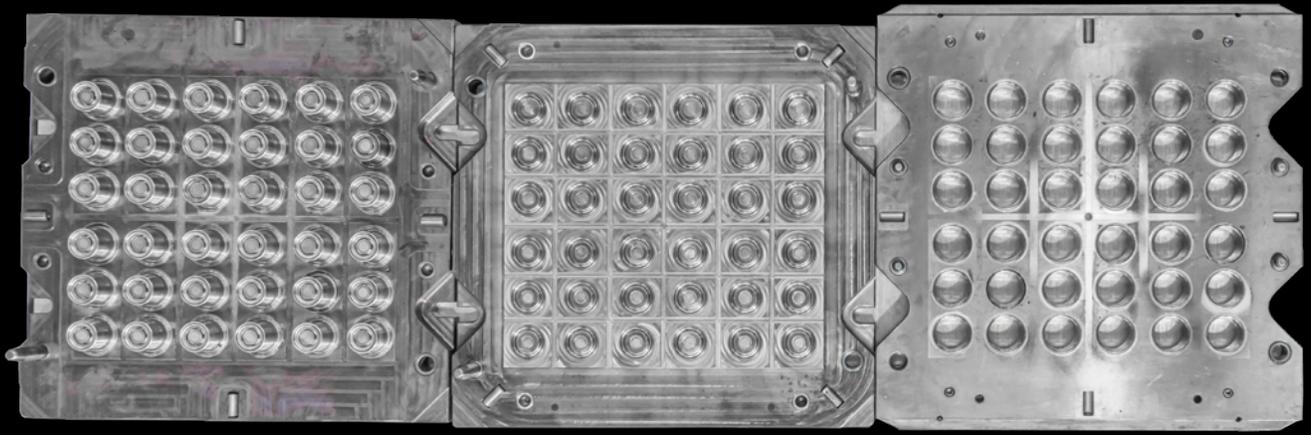

Tool & Mould Making

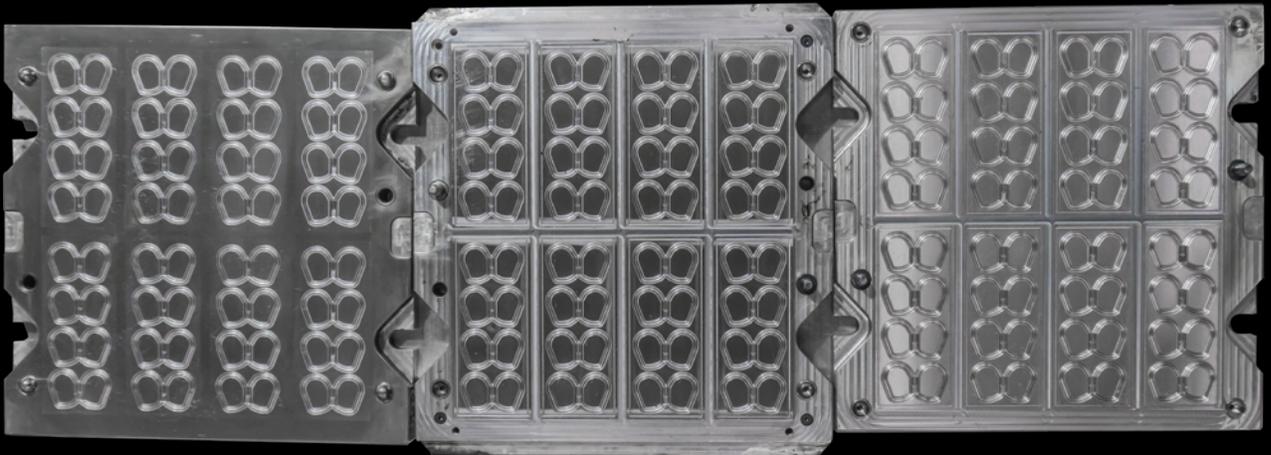

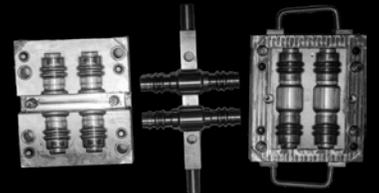

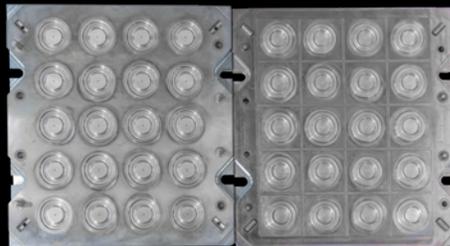

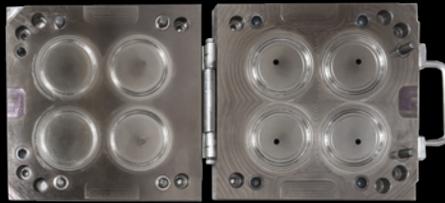

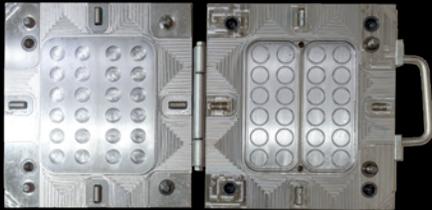

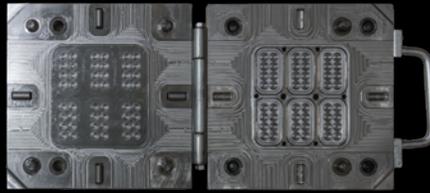

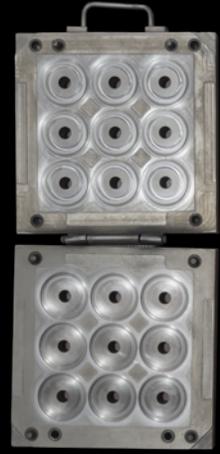

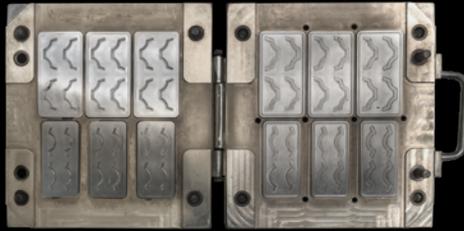

*Fast and flexible rubber mould tool design
for customers across the world*

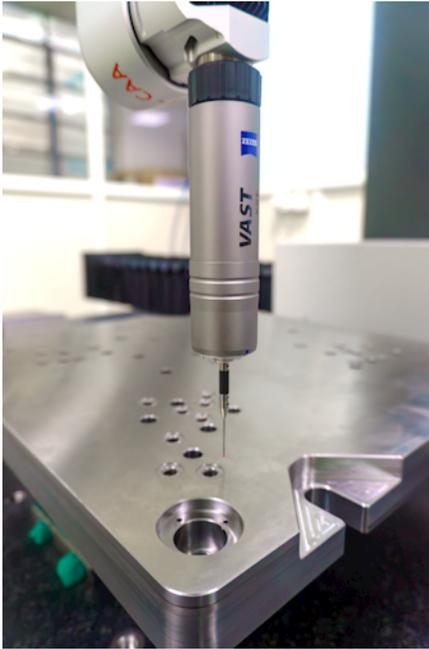

Our tool room, equipped with cutting-edge rubber mold technology, enhances our production capabilities, whether for **one-off prototypes or mass production with multicavity tools**. We know how best to section a tool to simplify manufacture and how materials behave under pressure to ensure minimal wastage and flash.

Operated by dedicated and highly trained staff all CNC machinery is directly linked to our CAD centre, closing the link between client engineering drawing and custom tooling. This eliminates any area for potential error.

In-house CMM Lab

Quality and safety

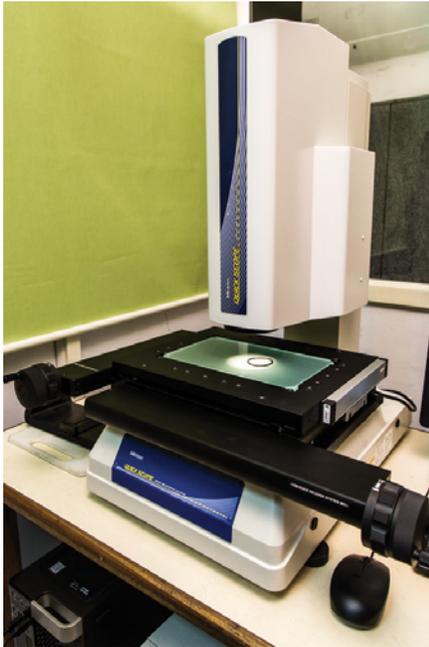

The company prioritizes quality and safety to assist its customers in meeting the stringent standards of the industry. Internally, the company emphasizes the well-being of its staff by providing them with necessary information, training, and supervision to ensure their health and safety. This collective effort ensures that work areas are as secure as possible and that the safest methods available are employed.

The company's commitment to Total Quality Management is unmatched. We have equipped our labs with cutting-edge facilities including a surface table and a Coordinate Measuring Machine (CMM) sourced from Germany, ensuring precision and accuracy. Our team comprises trained technicians who contribute to upholding the highest standards in our operations. Additionally, we proudly hold an ISO 9001 certificate, demonstrating our dedication to maintaining excellence throughout our processes.

Top engineering teams across the world choose us because of the innovation, quality and reliability of our parts which place us firmly at the forefront of our industry.

- **KS Venkatesh**
Managing Director

CNC Vision Measuring System

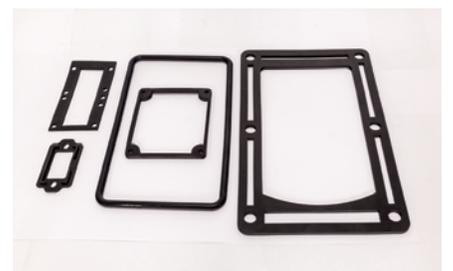

In-house Sample Development

*Small, close tolerance, flashless mouldings
no-one else can match*

1. Trim dies are utilized to eliminate secondary operations.
2. We ensure high quality and prompt delivery of dies.
3. Our focus is on high precision and superior surface finish.
4. We employ the latest design techniques to incorporate very effective air vents, reducing the rejection rate of finished components.
5. Tools are crafted from P20/SS/H13 materials, offering superior heat retention and tool life due to their non-stick, non-corrosive, and pre-hardened properties.
6. We provide a first sample report with each die to prevent delays in customer development.
7. Our ample spare capacity allows for maximum die production.
